k. Description of Request: In its application, GRDA requests a **permanent amendment** of the project's Article 401 reservoir elevation rule curve, from August 16 through October 31, each year.

GRDA indicates that it seeks the rule curve change to reduce the risk of vessel groundings at Grand Lake in late summer, improve recreation during a peak recreation season, better balance competing stakeholder interests, and provide additional water storage so that, in the event of drought, water would be available for release to aid in maintaining water quality in the river downstream.

Under GRDA's proposal, between August 16 and September 15, the reservoir would be maintained at elevation 743 feet Pensacola Datum (PD), which is up to two feet higher than the current rule curve. Between September 16 and September 30, the elevation would be lowered from 743 to 742 feet PD. Between October 1 and October 31, the reservoir would be maintained at elevation 742 feet PD, which is up to one foot higher than the current rule curve. After October 31, reservoir elevations would follow the project's current rule curve. With its application, GRDA includes a Storm Adaptive Management Plan that would be followed to address high water conditions upstream and downstream of Grand Lake during major precipitation events in the river basin. GRDA also includes a Drought Adaptive Management Plan that would be followed to determine project operation, including deviations from the rule curve elevations, to allow releases for maintenance of downstream water quality and reliable operation of GRDA's downstream Salina Pumped Storage Project if certain drought conditions occur.
